History of the Commission

Missouri Public Service Commission

From regulating street cars and railroads in 1913, to telephone divestiture and nuclear power plants in the 1980s, the Missouri Public Service Commission has had a changing, but major, impact on the State's citizenry and economy throughout most of the Twentieth Century.

Governor Elliott Major supported creation of the Missouri Public Service Commission. In his inaugural address of January 13, 1913, Major called the creation of the Missouri Public Service Commission, "one of the necessities of the hour." Governor Major stated, "The enactment of such a law will not only be to the interest of the public, but also to the interest of the utilities regulated and controlled. A number of other states, including New York and Wisconsin, have already enacted such a law, and it has proven to be exceptionally benefi-

cial and satisfactory. The control of public service corporations is a fixed policy of this State and government, and it is now an accepted axiom that the operation of a public utility is a public trust, subject to the control of the State by fair and just regulatory measures." Governor Major considered the creation of the Missouri Public Service Commission to be "one of the most important acts of the Legislature in many years."

The 47th General Assembly passed legislation sponsored by Carroll County Senator William Busby which created the Missouri Public Service Commission. The law, which took effect on April 15, 1913, was the first trial in Missouri of comprehensive, statewide regulation of rates and service of all public utility companies by a commission. The Missouri Public Service Commission replaced the Board of Railroad and Warehouse Commissioners which had been established in 1875 to regulate railroads operating in Missouri.

Two Democrats and two Republicans were named to the first Commission. In its April 14, 1913 editions, the *Jefferson City Daily Post* stated, "By going outside of his own party and appointing two Republicans the governor upset the doleful prediction of Senator James A. Reed and other old guard

leaders that he would appoint 'political henchmen' to the commission and thus pay off his political debts."

John Atkinson, a former Assistant Attorney General and Speaker of the Missouri House, was named as the Commission's first chairman. Atkinson, from Doniphan, Missouri, had acted as private secretary to the Governor during the previous legislative session. Former Missouri Supreme Court Justice John Kennish also served on the first Commission. Kennish, a former state senator, served from 1913 until 1917. He returned in 1920 to fill the unexpired term of David Blair when Blair left the Commission to serve on the Missouri Supreme Court. Frank Wightman, a railroad expert from Monett, Missouri, and a former member of the Board of Railroad and Warehouse Commissioners, was appointed to the first Commission. The fourth member named was Howard Shaw, Dean of the School of Engineering at the University of Missouri-Columbia. St. Louis attorney William Woerner was appointed to the PSC on July 3, 1913. Woerner's appointment came almost three months after the other four Commissioners had been appointed.

Under the law creating the Missouri Public Service Commission, the PSC was to hold sessions in the State Capitol in Jefferson City. Due to the 1911 fire which destroyed a good portion of the Capitol, the Commission held its first session in the temporary State Capitol. That structure was built between the State Capitol and the current Missouri Highway and Transportation Department Building. During that session, the Commission issued its first order which granted authority to the Missouri, Kansas and Texas railroad to issue

History of the Commission

\$54,978,000 in bonds for refunding, rebuilding equipment and the acquisition of new property. After its first session, the Commission moved to quarters in the old Supreme Court Building until the State Capitol was rebuilt. The old Supreme Court Building was located where the Missouri Highway and Transportation Department Building stands today.

When established in 1913, the PSC was given general supervision over all railroads, street railroads, express companies, all kinds of car companies, steamboat companies operating upon waters in Missouri and all other common carriers. The Commission was also given jurisdiction over all gas corporations, electric, telephone, telegraph, water and municipal systems.

At the close of the year, December 31, 1913, there were 877 corporations, municipalities and individuals engaged in serving the public in some capacity that, by operation of PSC law, placed them under the supervision and jurisdiction of the Commission. In 1913, the Commission regulated approximately 426 telephone corporations.

With the creation of the Missouri Public Service Commission, the General Assembly no longer set rates for public utilities. In 1907, the General Assembly passed a law which had reduced the maximum rates for railroad companies carrying freight and passengers. Those railroad companies obtained an injunction against enforcement of the law and an appeal was taken on behalf of the State of Missouri to the United States Supreme Court. The court case, generally referred to as "The Missouri Rate Cases," was argued before the U. S. Supreme Court by the Missouri Attorney General's office. Led by then

Attorney General Elliott Major, the state's position was upheld in 1913.

In 1915, the Missouri Public Service Commission listened while railroad companies offered specific evidence seeking to raise rates above those mandated by statute in 1907. In a November 10, 1915 decision, the Commission allowed the railroad companies to charge fares and rates higher than those that had been fixed by statute. Commissioner Edwin Bean wrote in a 1961 *Missouri Historical Society Bulletin*, "Governor Major made no public comment on the decision, but he was furious that a commission of his creation had increased the rates he had labored so hard to maintain in the case in court."

The 1915 case proved to be a significant one in the early history of the Commission. Edwin Bean wrote that while the case "... made many enemies for the Commission, especially among members of succeeding legislatures, it gained strong supporters among conservative elements, including the judges of the Appellate Courts. The public utility companies had stood (sic) askance at the enactment of the Public Service Commission Law. The decision in the railroad rate case convinced them that decisions by the Commission would be made on the evidence rather than on

political considerations, so that they became supporters of such legislation at the state rather than at the local level."

Rates during the first four years of the Missouri Public Service Commission remained stable and, in many cases, they were lowered. That changed with World War I. With the war came a sharp rise in the cost of labor and materials.

Commissioner David Blair looked back at the war years in a speech before the St. Louis Electrical Board of Trade in April, 1920. Blair told the gathering that "... while men will smilingly and complaisantly, though not uncomplainingly, pay two or three times the old prices for food and clothing, building materials and for their amusements, an advance of from 20 to 40 percent in utility service rates is always met by a

History of the Commission

storm of popular disapproval." Blair noted rates had to increase or bankruptcy and complete breakdown of service would have been the ultimate result.

In the early 1920s, a storm of opposition arose against Public Service Commissions across the country. The public had grown suspicious because utility rates had increased because of high prices. Many seemed to think Commissions were established solely to reduce utility rates. Even though labor, fuel and materials rose drastically, the public failed to understand why utility rates must go up. Commissioner Blair noted that due to the war and the need to increase utility rates, the early opponents of state regulation became its champions while its former champions became its critics.

The Missouri Public Service Commission moved from its quarters in the

old Supreme Court Building in the early 1920s. The Commission held sessions in its new quarters in the State Capitol.

Prices started to decline during the end of 1921 and early in 1922. When a utility company was granted a rate increase by the Public Service Commission, that company filed detailed financial statements of its revenues and expenses with the Commission. Those reports were reviewed by the PSC Staff. Whenever it appeared a utility company had a sufficient decrease in operating cost, the Commission did not set a formal hearing. Instead, the Commission made a phone call. The company was told it could stand a rate reduction and they could either agree with the Commission's reduction or request a formal hearing. Although some protested, most accepted the rate reduction.

The Missouri General Assembly passed legislation in 1927 which expanded the duties of the Missouri Public Service Commission. The Commission was given jurisdiction over motor bus operators, increasing the PSC workload by approximately 30 percent. Problems in the motor bus industry existed when the PSC took over jurisdiction. There were no established rates and some of the vehicles used on Missouri highways were unsafe.

Before regulation was fully established, the Commission learned of several cases in which passengers were left stranded on highways.

In 1927, the Missouri public was furnished telephone service by approximately 1,300 companies. The Missouri PSC regulated approximately 475 telephone companies while another 825 were small mutual companies, a majority of which were formed by farmers who maintained their own lines and equipment and did not provide service to the general public.

The duties of the Missouri Public Service Commission expanded again in 1931 when the Commission was given jurisdiction over motor freight carriers. The Bus and Truck Act became effective on September 14, 1931. During this period, the Commission also issued orders which authorized the construction of natural gas plants in 40 Missouri cities which did not have natural gas service. Central Missourians watched as the Osage River took on a new look in the early 1930s as Union Electric Company built Bagnell Dam which created the Lake of the Ozarks.

In July of 1934, the Missouri Public Service Commission moved from its offices in the State Capitol to the old Federal Court Building which adjoined the Capitol grounds. From November 1934 to November 1936, the Commission issued approximately 7,700 orders on utility matters.

The early 1940s found the United States involved in World War II. The repercussions of war were felt by the Missouri Public Service Commission as employees were lost to the war cause and projects planned by the Commission had to be delayed.

During the war, the Commission

History of the Commission

expanded its usual and customary work to meet the emergencies of war. Special studies were made by the Commission on methods of defense against every anticipated sabotage effort to plants which supply water, electricity, gas and other utilities necessary for the civilian and military population. After the bombing of Pearl Harbor, problems developed regarding power and gas supplies. The Missouri Public Service Commission joined other midwestern commissions to form the Mid-West Utility Commissioners Committee. Under its supervision, studies and surveys were made of available power supplies in various states in order to reserve power for use in emergencies and in the war effort.

The first female Commissioner was appointed to the PSC in January, 1943. Miss Agnes Mae Wilson, a Trenton, Missouri lawyer and former high school teacher from Galt, Missouri, was Secretary of the Commission prior to her appointment. Her time on the Commission was a busy one. By 1945, the Commission had jurisdiction over 36 railroads, nearly 100 bus companies and approximately 1,000 truck companies. The Commission also regulated 300 companies supplying electricity, gas, water and steam to Missourians. The Public Service Commission also regulated approximately 161 telephone companies.

As the United States headed out of the 1940s and into the 1950s, utility companies were faced with the problem of rendering services to a greatly increasing number of customers through facilities which were basically constructed before the war. Increased operating costs caused many utility companies to petition the Commission seeking an increase

in rates.

In 1920, there were 348 separate electric systems operating in Missouri. By the mid-1950s, there were 14. Electric plant investment from the mid-1940s to the mid-1950s increased by approximately 248 percent. At the same time, use of service by the public had increased by that much or more. Gas companies continued to grow at an enormous rate during this time and water companies were able to expand plants and complete construction work to meet increased customer needs.

The Missouri Public Service Commission regulated approximately 493 telephone companies in 1920. By the mid-1950s, that number had dwindled to 144 due to consolidations by purchase and transfers to corporate interests. Plant investment for telephone service throughout Missouri increased by approximately 264 percent. To replace former systems with dial operated plants, old telephone plant had to be extensively replaced. In addition, companies continued to expand the telephone network into the rural areas of Missouri.

The Commission moved its operations again in the 1950s. This time, the Commission moved from the old Federal Court Building to the Jefferson State Office Building. The Commission

occupied the 9th and 10th floors of that building for approximately 30 years before moving into its present offices in the Truman State Office Building in November, 1983.

From 1951 to 1960, gas utilities expanded dramatically. The volume of gas sold increased by 77 percent during that time and income from gas sales increased by approximately 122 percent. Investment in plant property increased 169 percent and the number of consumers using natural gas increased by approximately 31 percent.

The telecommunications industry continued to grow as Missouri entered into the 1960s. New telephone services such as WATS and Telepak were introduced. In addition, 95 percent of all telephones in Missouri were dial operated. In 1963, extensive cable pressurization programs were being carried out to provide extra resistance to service interruptions caused by storms and rain. In

History of the Commission

1964, a new service plan was introduced to upgrade telephone service to approximately 28,000 rural customers who had eight-party service.

Following a major power failure in the northeastern part of the United States in November of 1965, Missouri Governor Warren Hearnes ordered an investigation to determine if a similar power failure could occur in Missouri. The Public Service Commission was responsible for the investigation which was to also determine what steps could be taken to avert such a power failure and what appropriate actions could be taken in the event a massive failure did occur in Missouri. The investigation revealed Missouri's power situation was less vulnerable to breakdown than in the heavily populated northeast. The report also recommended corrective measures be taken to assure an uninterrupted power supply for Missouri consumers.

Governor Warren Hearnes on June 1, 1967, signed into law emergency legislation which gave the Missouri Public Service Commission control over private sewer systems operating as public utilities in Missouri.

Several rate increase request cases were filed with the Missouri Public Service Commission during the late 1960s and early 1970s. Most increase requests were made because inflationary pressures had driven up the cost of labor, materials and capital for utility companies. The effects of inflation were intensified due to the rising demand for those services provided by utility companies. In order to keep pace with demand, many utilities were forced to undertake expansion at a time when costs were high. During the 1970-71 fiscal year, there were 51 utility rate proceedings before the Commission, a 66 percent increase over the previous year and a 100 percent increase over the 1968-69 fiscal year.

The duties of the Missouri Public Service Commission were expanded during the 1972-73 fiscal year. The Commission was given jurisdiction over the safety of mobile homes and recreational vehicles. In 1973, the Commission started a program enforcing safety standards covering mobile homes and

recreational vehicles manufactured or sold in Missouri.

In 1973, the Missouri Public Service Commission authorized the Kansas City Power and Light Company and the St. Joseph Light and Power Company to construct a 600 megawatt coal-fired generating plant on the Missouri River near Weston. Today that facility is known as Iatan. In July of that same year, Union Electric Company announced its intention to construct the first nuclear-power electric generating plant in Missouri. The Callaway nuclear power plant is located approximately 20 miles northeast of Jefferson City in Callaway County. The Callaway nuclear power plant began commercial operation in December, 1984.

The first review of the management and operations of a utility under the jurisdiction of the Missouri Public Service Commission was made in the fall of 1975. The Commission directed the Missouri Public Service Company to contract with a consulting firm to conduct a management review of the company. The Continental Telephone Company of Missouri was ordered in November of 1975 to contract with a consulting firm for a management review. In addition, Union Electric of St. Louis was also directed to contract with a consultant in November of that same year to review Union Electric's plans for the construction of its nuclear power plant facility in Callaway County, Missouri.

The Missouri Public Service Commission took an important step toward helping consumers who were faced with utility bills they could not pay when it adopted the Cold Weather Rule in 1977. This rule contains strict procedures which utility companies must follow

History of the Commission

before heat-related utility service can be terminated during the winter months.

A Commission decision in 1974 was overturned by the Missouri Supreme Court on June 29, 1979 when the high court disallowed the so-called "fuel adjustment clause" for electric companies under PSC jurisdiction. In 1974, the Commission authorized the state's electric utilities to automatically pass along changes in the price of fuel from its suppliers to its customers. However, in 1979, the Missouri Supreme Court ruled the Commission did not have the express statutory authority to grant any rate increases to electric companies without considering "all relevant factors". On October 19, 1979, the Cole County Circuit Court, on remand, ordered the state's major electric utilities to refund approximately \$14 million collected through a surcharge to the fuel adjustment clause during 1976 and 1977. In addition, the court ordered the companies to add 6 percent interest to the refund.

Dramatic increases in the price of natural gas greeted Missouri consumers as they entered into the 1980s. The entire nation was faced with an energy crisis, which included people waiting in line at local gas stations to fill up their cars at prices which reached over a dollar a gallon. The federal government enacted the Natural Gas Policy Act of 1978, which provided for the phased deregulation of natural gas by 1985. As a result, natural gas customers in Missouri saw rates increase by approximately 127 percent from January, 1979 to July, 1983. Rate increases granted to wholesale suppliers by the Federal Energy Regulatory Commission accounted for approximately 112 percent of that increase.

During the early 1980s, the Missouri Public Service Commission was faced with new and complicated issues, including nuclear power plant rate cases and the divestiture by AT&T of its Bell Operating Companies. January 1, 1984, marked the implementation of one of the biggest antitrust case settlements in United States history; the breakup of AT&T. Access line rates, interLATA and intraLATA competition, telephone bypass and toll pooling were issues before the Public Service Commission. The continued goal of universal telephone service, the future pricing structure of telephone rates and the smooth transition of the telephone industry toward an increasingly competitive telecommunications environment were at stake.

Since its creation in 1913, the Public Service Commission regulated transportation matters (railroad, bus and truck) in Missouri. That changed in 1985 when Governor John Ashcroft signed into law Senate Bill 2 which established a separate Division of Transportation to handle transportation matters. After more than 70 years, transportation issues were no longer under PSC jurisdiction.

The challenge of determining prudent nuclear power plant construction

costs faced the Missouri Public Service Commission in 1984. Three electric companies filed rate cases with the Commission seeking to place nuclear power plant construction costs in consumer rates. Arkansas Power and Light Company sought to include its share of the cost of the Grand Gulf nuclear power plant. Union Electric Company sought recovery of the construction costs of its Callaway nuclear power plant and the Kansas City Power and Light Company filed a rate case involving the Wolf Creek nuclear power plant. In each case, rate proposals filed with the Commission would have a significant impact upon consumer rates.

On March 29, 1985, the PSC issued its first decision regarding nuclear power plant construction costs. The Commission disallowed approximately \$384

History of the Commission

million from Union Electric Company's rate base due to mismanagement and unjustified cost overruns at the Callaway nuclear power plant. That represented the largest single "prudency" disallowance by any PSC in the nation up to that time. In addition, the Commission ordered the company to phase-in a \$455 million (45%) increase over an eight year period to lessen the financial impact upon customers of the utility company.

On April 23, 1986, the Commission determined that approximately 60 percent of Kansas City Power and Light Company's rate increase request should be denied. A \$78.2 million increase was ordered phased-in over a seven year period. The Commission cited excess capacity, cost overruns and project mismanagement at the Wolf Creek plant and excessive earnings in non-Wolf Creek operations as major factors in

reaching its decision. A final rate case decision involving nuclear power plant construction costs was reached on April 24, 1986, when the Commission issued its decision in a case filed by the Arkansas Power and Light Company. The Commission significantly reduced the company's request, authorizing Arkansas Power and Light to phase-in a \$6 million rate increase over five years. The company had asked for approximately \$17.1 million. A significant portion of Arkansas Power and Light's rate increase was attributable to a Federal Energy Regulatory Commission decision which allocated 36 percent of the Grand Gulf nuclear power plant costs to Arkansas Power and Light.

On March 28, 1986, the Commission rejected, for a second time, a request filed by the Union Electric Company to recoup from ratepayers, the cancellation costs of the Callaway II nuclear power plant. The case came before the Commission on remand from the Missouri Supreme Court. In 1983, the Commission had denied the cancellation costs, stating "Proposition I" barred recovery. ("Proposition I" was a statute enacted by referendum which prohibited recovery of power plant construction costs before a plant was "fully operational

and used for service"). Union Electric appealed the Commission's decision and the state's high court remanded the matter to the Commission for further findings, declaring "Proposition I" was inapplicable to costs of a cancelled unit. In the Commission's 1986 decision, the PSC determined the cancellation costs were extraordinary expenses which the Commission could allow or disallow, in its discretion, based upon the unique facts and circumstances of an individual case. The Commission compared the effect of non-recovery on Union Electric with the effect of recovery upon ratepayers. The Commission concluded that "the increased rates associated with recovery would be unjust and unreasonable." The Commission's decision was upheld by the Missouri Court of Appeals, Western District, on November 1, 1988.

In the spring of 1986, Governor John Ashcroft named a 20-member task force to review and recommend possible changes in state laws regarding the telecommunications industry. Commission Chairman William Steinmeier was named to head the task force. Through this committee's work, House Bill 360 was introduced and passed by the Missouri Legislature. On September 28, 1987, the first major revision of Chapter 392 since its enactment in 1913, took effect. The new statutory framework is designed to give the Commission the necessary flexibility to manage the transition of the telecommunications industry to a more competitive environment. The new law authorizes the Commission to relax regulation of telecommunications services where competitive market forces are operating to protect consumers from unfair prices. It also protects the provision of basic local tele-

History of the Commission

phone service as a non-competitive service provided under traditional regulation by the Commission.

In October of 1986, President Ronald Reagan signed into law the most significant overhaul of our income tax system since 1954. Within two weeks of the signing of the Tax Reform Act of 1986, the Commission initiated a proceeding to determine the impact of the new income tax structure upon public utilities in Missouri.

During 1987, the Missouri Public Service Commission reached an unprecedented accomplishment when it issued decisions which lowered utility rates by approximately \$451 million statewide. Of that total, approximately \$161 million reflected agreements reached among various parties to reduce rates to reflect savings associated with the Tax Reform Act of 1986. The balance reflected decisions reached based upon audits conducted primarily by the Public Service Commission Staff on various utility companies in Missouri.

During 1987, the Commission issued decisions which eliminated phase-in schedules for Union Electric and the Kansas City Power and Light Company as they related to previous Commission decisions in nuclear power plant cases. Union Electric's phase-in schedule was eliminated three years ahead of schedule, saving ratepayers approximately \$183.2 million in scheduled rate increases through 1990. In addition, phase-in increases totaling approximately \$90 million over a four year period from 1989 through 1992 were eliminated for customers of the Kansas City Power and Light Company. The phase-in elimination was the result of an agreement reached among several parties, including the PSC Staff and the Office of the Public Counsel.

In the wake of seven natural gas incidents in Missouri between October 30, 1988 and February of 1989, the Public Service Commission on February 24, 1989, issued an emergency rule which required all natural gas distribution companies and municipal system operators to conduct instrument leak survey tests on all unprotected customer owned and company owned steel service lines by July 1, 1989.

Those seven natural gas incidents resulted in five fatalities, 17 injuries and extensive property damage.

On May 1, 1989, the Commission proposed a major rewrite of its natural gas pipeline safety rules, designed to strengthen the gas safety program in Missouri.

The proposed permanent rules included an increase in the frequency of leak surveys of unprotected steel lines to require those lines be inspected annually; requiring replacement programs for unprotected steel service lines and yard lines; and requiring the development of a replacement program for cast iron mains.

After extensive summer hearings, the Commission adopted its proposed rules on November 9, 1989.

Throughout its history, the Missouri Public Service Commission has been called upon to reach many major decisions which effect all Missourians and the economic growth of our State. While the Commission's role has changed from regulating streets cars in 1913 to the rapidly changing telecommunications environment of the 1980s, its charge during this period has remained the same. The Commission has maintained the role of ensuring customers receive safe and adequate service at just and reasonable rates while affording shareholders of the utility company an opportunity to earn a reasonable return on their investment.

Statement from the Commission

Fiscal Year 1989 from the Commissioners' perspective

The Missouri Public Service Commission has the responsibility of ensuring that consumers receive adequate amounts of safely delivered and reasonably priced utility services at rates that will provide the companies' shareholders the opportunity to earn a reasonable return on their investment.

The Commission regulates utility rates, service and safety. Investor-owned electric, gas, telephone, sewer, and water companies are under the Commission's jurisdiction. The Commission also monitors the construction of mobile and modular homes and recreational vehicles.

Although rates charged by electric cooperatives and municipal governments are determined by their governing boards, the Commission has jurisdiction over the safety of services provided by the cooperatives and municipally-operated natural gas systems. Utility

services provided by municipal governments are exempt from Commission regulation, except for the regulation of natural gas safety.

Natural Gas Safety Crisis

The Commission focused its attention upon the safety of the State's natural gas distribution systems in 1989. The need for a re-examination of the safety of these natural systems became apparent following seven natural gas incidents in Missouri during the 1988-89 heating season. These explosions and fires resulted in five fatalities, 17 injuries and extensive property damage.

On February 24, 1989, the Commission issued an emergency rule requiring all gas corporations and municipal gas systems to immediately inspect unprotected steel service lines. The Commission determined that unprotected steel service lines constituted an immediate danger to the public health and safety, requiring the adoption of the emergency rule.

All investor-owned and municipally-operated gas systems completed leak surveys utilizing sophisticated instruments, pursuant to the emergency rule

adopted by the Commission. These gas operators discovered 26,380 natural gas leaks statewide, 11,865 of which were classified as hazardous leaks which required repair within two weeks of detection.

Based upon the results of the leak surveys conducted statewide, the Commission on May 1, 1989, proposed a major revision of its natural gas pipeline safety rules. The revisions were designed to strengthen the gas safety program required of natural gas distribution companies in the State. The major provisions of the new permanent gas safety rules included:

- increasing the frequency of leak surveys of unprotected steel lines to require those lines be inspected annually;
- requiring the use of the latest instrument technologies for performing leak surveys and prohibiting reliance on visual, vegetation surveys for leaks;
- requiring replacement programs for unprotected steel service lines and yard lines;
- requiring the development of long term replacement programs for cast iron mains;
- establishing specific training requirements for company gas safety personnel;
- prohibiting the installation of "customer-owned" service lines and yard lines.

These proposed rules were made permanent on November 9, 1989, following the completion of rulemaking proceedings. In addition, House Bill No. 938 was enacted by the General Assembly which clarified and strengthened the Commission's jurisdiction over municipally-operated natural gas systems.

Statement from the Commission

Southwestern Bell Telephone Rate Complaint Proceeding

On June 20, 1989, the Commission issued its decision in complaint proceedings brought by the Commission Staff and the Office of the Public Counsel alleging that Southwestern Bell Telephone Company's rates were excessive. The Commission also addressed telephone network modernization issues and a rate stability plan proposed by Southwestern Bell entitled "Telefuture 2000."

The Commission concluded that Southwestern Bell's annual telephone revenues should be reduced by approximately \$101 million. The Commission also encouraged Southwestern Bell to continue its efforts to modernize its telephone network in Missouri. The Commission also rejected the part of Southwestern Bell's "Telefuture 2000" plan which would have allowed the company to increase telephone rates annually based upon increases in the Consumer Price Index, minus a three percent productivity factor.

Following the Commission's decision, Southwestern Bell sought and obtained a stay from the Cole County Circuit Court, pending the Company's appeal of the rate reduction order. The Office of the Public Counsel also appealed the Commission's decision, arguing that some of the rate reductions should have included basic, local exchange services.

On September 26, 1989, the Commission reached an agreement with Southwestern Bell and the Office of the Public Counsel which ended their appeals of the Commission decision and resulted in substantial rate reductions, a rate case moratorium through 1992, and

a telephone network modernization plan for customers of Southwestern Bell Telephone Company. Under the settlement agreement, Southwestern Bell agreed to reduce annual telephone revenues by approximately \$82 million. Basic monthly telephone services and long distance rates received rate reductions. In addition, service connection charges, touch tone rates, access charges, zone and mileage charges, and WATS, 800 service and foreign exchange rates were reduced.

Southwestern Bell also agreed to replace all of its electromechanical switches with state-of-the-art digital switches by 1992. In addition, telephone wiring between central offices in the Southwestern Bell system will be replaced with fiber optic cable by 1992. Multi-party service will also be eliminated by 1997.

The Commission recognized that as more of Southwestern Bell's regulated services are subject to competition, the telephone company should have additional incentives to increase its operating efficiency and effectively compete. A three year incentive plan was developed under the settlement agreement. Under this experiment, the company will be allowed to keep all earnings up to a 14.1

percent return on equity. If the company earns more than 14.1 percent, it will share any excess over 14.1 percent with its customers in the form of bill credits.

Telecommunications Reform

The decision of the federal government to require AT&T to divest itself of the Bell Operating Companies and the decision of the Federal Communications Commission to introduce competition into many of the telecommunications markets has required the Public Service Commission to reevaluate traditional methods for regulating telecommunications companies.

In 1989, the Commission decided to modify the traditional regulatory framework for regulating the interexchange industry to provide for more pricing

Statement from the Commission

flexibility. American Telephone & Telegraph (AT&T) will be permitted to adjust rates within a specified band of rates without filing a traditional rate case. Other interexchange carriers (i.e. MCI, U.S. Sprint and 26 other interexchange carriers) were classified as "competitive" and, as a result, the Commission will not regulate the rates charged by these carriers.

Under the Commission decision, AT&T agreed to flow through to its customers the reduction in access charges which was ordered by the Commission in the Southwestern Bell complaint case. The Commission has estimated that AT&T's rates should be reduced by approximately 10 percent due to access charge reductions. In addition, AT&T agreed to further reduce its rates by 1.5 percent annually for the next four years.

These changes in regulatory methods were made pursuant to authority granted by the legislature in House Bill No. 360. In a nutshell, House Bill No. 360 authorizes the Commission to relax regulation of telecommunications services where competitive market forces are operating to protect consumers from unfair prices. It also protects the provision of basic local telephone service as a non-competitive service provided under traditional regulation by the Commission. It protects against abandonment of basic service by AT&T and the local telephone companies. Because statewide average long distance rates make long distance service available to all Missourians—both urban and rural—on equal terms, the bill requires permission from the Commission before any rates for service are deaveraged. It also requires the Commission to scrutinize rates for basic telephone service to ensure that competitive enterprises are not being subsidized by a customer's local telephone bill.

A service or company may be classified by the Commission as competitive, transitionally competitive, or non-competitive. The degree of regulation of such service or company will depend

upon the classification into which it falls. Thus, the statute will allow the Commission to bring to consumers the benefits of competition in those areas where it may thrive. Consumer benefits are expected to include greater innovation, a wider variety of products and services, and of course, several companies competing to provide service at the lowest price. At the same time, it authorizes the Commission to manage the transition to a more competitive environment and to fully regulate and maintain reasonably affordable basic telephone service.

Extended Measured Service Experiments and Extended Area Service Alternatives

The Commission also monitored ongoing experiments with Extended Measured Service (EMS) in 1989. Under the experimental plan, customers in exchanges with high usage to adjoining exchanges could receive a 50 percent discount on toll calls to the adjoining exchange. As an alternative, residential customers could receive service to the adjoining exchange under a pricing plan of \$5 per month and 25 cents per call. The Commission will consider the results of these experiments in the future and will determine if similar services should be made available throughout the state. In addition, the Commission will consider alternative flat rate extended area service plans being developed by the Office of the Public Counsel, the local exchange telephone industry, and certain municipalities. Hearings regarding these plans were conducted in September, 1989, and a Commission decision is expected in December, 1989.

Statement from the Commission

Alternative Operator Service

On April 19, 1989, the Commission issued its decision regarding the provision of operator services to hotels, privately-owned pay telephones, colleges, hospitals, airports, and other traffic aggregators. The Commission determined that alternative operator services provided to traffic aggregators was not in the public interest and will not be allowed in Missouri if the telecommunications company provides operator services principally to traffic aggregators. However, the Commission determined that operator services provided directly to customers ancillary to toll service would be authorized in the State. The Commission will allow operator services provided to aggregators only by firms which primarily provide operator services directly to customers ancillary to toll services in Missouri under certain conditions designed to protect customers from abuses.

Participation Before Federal Bodies

The Commission continued its active participation in federal forums to ensure that national policies are consistent with the best interests of Missourians.

In recent years, there have been a number of significant regulatory initiatives undertaken by the Federal Energy Regulatory Commission (FERC) with regard to those segments of the natural gas and wholesale electric industries under its jurisdiction. These initiatives have included the establishment of an open access gas transportation system, the de-regulation of "old" natural gas,

and more recently, rulemaking proceedings regarding independent power producers, competitive bidding for supply of electricity and the determination of avoided cost rates for cogeneration. The Commission has actively participated and testified in proceedings before the FERC where Missouri interests were affected.

The Commission has also participated in numerous proceedings before the Federal Communications Commission (FCC) concerning such issues as the appropriate level of the federal subscriber line charge, and rate cap proposals for regulating AT&T and local exchange companies. In addition, the Missouri Commission participated in the appeal of the FCC's Computer III decision which pre-empted the states in the enhanced services markets.

Conclusion

In conclusion, the Missouri Public Service Commission continues to review its regulatory policies to ensure that the broad public interest is promoted and protected. It remains the responsibility of the Commission to ensure that consumers receive adequate amounts of safely delivered and reasonably priced utility services at rates that will provide the companies' shareholders the opportunity to earn a reasonable return on their investment.

Commission Resources

Current Commissioners and Biographies

William D. Steinmeier

Chairman

Mr. Steinmeier, an attorney, was first appointed Chairman of the Missouri Public Service Commission by Governor Christopher S. Bond on January 26, 1984, to complete an unexpired term. He was reappointed to a full six year term on April 15, 1985, by Governor John Ashcroft.

He is a member of the NARUC Executive Committee and Electricity Committee and serves on the Administrative Law Committee of the Missouri Bar.

Mr. Steinmeier received his JD degree from the University of Missouri-Columbia Law School in 1975, and his BA in Political Science from Wheaton College, Wheaton, Illinois, in 1972.

Mr. Steinmeier and his wife, Rebecca, have five children.

Chairman Steinmeier's term expires on April 15, 1991.

James M. Fischer

Vice-Chairman

Mr. Fischer, an attorney and former Public Counsel for the State of Missouri, was first appointed to the Missouri Public Service Commission by Governor Christopher S. Bond on January 3, 1984, to complete an unexpired term. He was reappointed to a full six year term on April 15, 1985, by Governor John Ashcroft.

He serves on the NARUC Committee on Communications, the Federal Communication Commission's Federal/State Joint Board, the Federal Communications Commission's Joint Conference on Open Network Architecture and the Council on Economic Regulation.

Mr. Fischer received his law degree from the University of Kansas in 1976, and his BS in Economics and Political Science from the University of Kansas in 1973.

Mr. Fischer and his wife, Hannelore, have three children.

Commissioner Fischer's term expires on April 15, 1991.

Commission Resources

Allan G. Mueller

Mr. Mueller, a former member of the Missouri Senate and House of Representatives, was appointed to the Missouri Public Service Commission by Governor Christopher S. Bond on July 11, 1983. Commissioner Mueller was reappointed and confirmed by the Missouri Senate to a second six year term in July of 1989.

He is currently serving on the NARUC Committee on Energy Conservation.

Mr. Mueller received his BS degree in Business Administration from St. Mary's University in San Antonio, Texas, in 1965.

Mr. Mueller and his wife, Carol, have four children.

Commissioner Mueller's term expires on April 15, 1995.

David L. Rauch

Mr. Rauch, a former member of the Missouri House of Representatives, was appointed to the Missouri Public Service Commission by Governor John Ashcroft on March 23, 1989.

Mr. Rauch had served in the Missouri General Assembly since 1979. As a legislator, he was Chairman of the Property Equalization and Classification Committee of the Missouri House of Representatives, and was a recipient of the St. Louis Globe-Democrat meritorious public service award for his efforts toward property tax reform in Missouri.

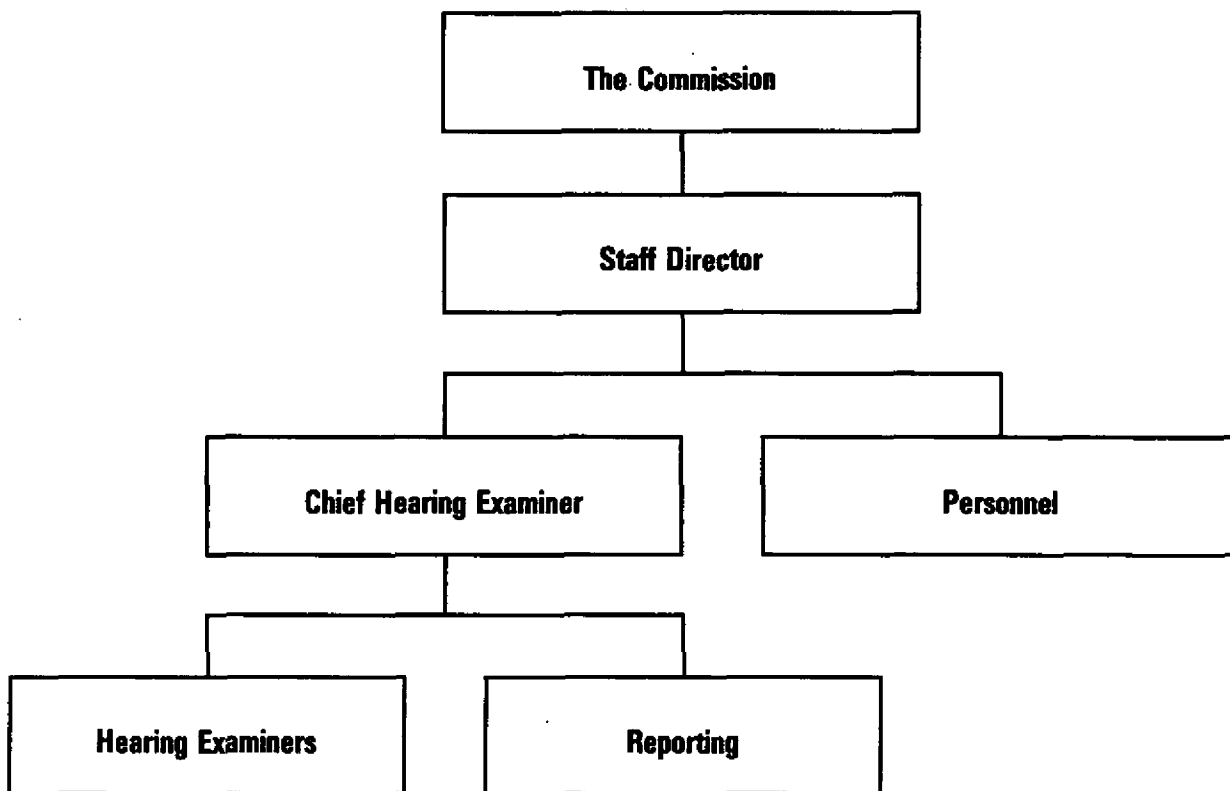

Mr. Rauch received his BA in History from Drury College. He also holds a Masters in Divinity from Andover Newton Theological School.

Mr. Rauch and his wife, Christine, have four children.

Commissioner Rauch's term expires on April 15, 1993.

Regulatory Activities

Year-at-a-Glance

July 1988	12	PSC denies AT&T request to establish a directory assistance charge within the State of Missouri.
	14	PSC files comments with the Federal Energy Regulatory Commission regarding NOPR's on Competitive Bidding and Independent Power Producers.
August	12	PSC Staff files complaint case against the Southwestern Bell Telephone Company. Staff seeks to reduce Southwestern Bell's annual revenues by approximately \$201.2 million.
	22	PSC denies request filed by the Great River Gas Company seeking to lease a portion of its natural gas system to the Tri-Energy Pipeline Company.
	30	PSC approves request filed by Southwestern Bell to reinstate quarterly bill credits to reflect company savings associated with the federal Tax Reform Act of 1986. Southwestern Bell will return to residential customers approximately \$15.2 million in quarterly bill credits.
	30	PSC approves the merger of the Osage Natural Gas Company into the United Cities Gas Company.
September	7	PSC approves agreement which authorizes the Missouri Telephone Company to reduce annual revenues by approximately \$138,000.
	9	PSC approves agreement which authorizes Missouri Public Service to increase annual natural gas revenues by approximately \$4.1 million.
October	14	PSC approves agreement which authorizes the Capital City Water Company to increase annual water revenues by approximately \$125,000.
	19	PSC conducts special program honoring 75th anniversary.
November	28	PSC approves agreement which authorizes the Citizens Telephone Company to reduce annual telephone revenues by approximately \$80,000.
	30	PSC approves application which authorizes UtiliCorp United Incorporated to acquire all of the issued and outstanding common stock of the Liberal Gas Company, the Seward County Pipeline Company and the Seward County Gas Company.
December	16	PSC approves agreement which authorizes Contel of Missouri, Incorporated, Contel System of Missouri, Incorporated and the Webster County Telephone Company to reduce annual telephone revenues by approximately \$5.9 million.
	28	PSC approves application which authorizes the merger of the Webster County Telephone Company into Contel of Missouri, Incorporated.
	29	PSC authorizes the Citizens Electric Corporation to reduce annual electric revenues by approximately \$2.5 million to reflect a change in wholesale power costs.
February 1989	21	PSC approves application filed by the United Telephone Long Distance Company of the Midwest (UTLD) to provide long-distance telephone service in Missouri.

Regulatory Activities

- | | | |
|-------|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | 24 | PSC approves application filed by the St. Joseph Light & Power Company to acquire all of the issued and outstanding shares of common stock of the Lawler Investment Corporation, and thereby acquiring, indirectly, all of the issued and outstanding shares of common stock of Lawler's wholly-owned subsidiary, the Missouri Valley Natural Gas Company. |
| | 24 | PSC issues emergency rule requiring all gas corporations and municipal gas systems to immediately inspect unprotected steel service lines. The Commission determined unprotected steel service lines constitute an immediate danger to the public health and safety, requiring the adoption of an emergency rule. |
| March | 10 | PSC authorizes U.S. Water/Lexington Incorporated to increase annual water revenues by approximately \$86,000. |
| | 15 | Missouri Cities Water Company files \$1.1 million rate request with PSC. |
| | 21 | Fourth year of Arkansas Power and Light phase-in of Grand Gulf costs takes effect. |
| | 23 | GTE North Incorporated files an \$8.3 million rate request with the Missouri PSC. |
| | 23 | Governor Ashcroft appoints David Rauch to the Missouri Public Service Commission. |
| | 31 | PSC approves the merger of the Michigan Energy Resources Company into UtiliCorp United Incorporated. |
| April | 12 | PSC approves the merger of the Great River Gas Company into the United Cities Gas Company. |
| | 17 | PSC issues order prohibiting Alternative Operator Service (AOS) providers from operating in Missouri. |
| May | 1 | PSC proposes major rewrite of natural gas pipeline safety rules, designed to strengthen the gas safety program in force in Missouri. |
| June | 20 | PSC issues decision which reduces Southwestern Bell Telephone Company's annual revenues by approximately \$101 million. Commission also encourages Southwestern Bell to continue efforts to modernize its system in Missouri. Southwestern Bell seeks and receives a stay of the Commission's order from Cole County Circuit Court. The PSC, Office of the Public Counsel and Southwestern Bell reach an agreement in September of 1989 which reduces Southwestern Bell's annual revenues by approximately \$82 million. Southwestern Bell also agrees to modernize its telephone system. |
| | 20 | PSC to conduct management audit of KPL Gas Service. |
| | 27 | Chairman William D. Steinmeier named President of the Mid-America Regulatory Conference, an association of utility regulators from throughout the Midwest. |

*Residential basic monthly telephone rate reduction percentage.

(1) Quarterly bill credits to reflect savings associated with the federal Tax Reform Act of 1986 were extended.

(2) Rate reduction resulting from PSC Staff audit.

(3) Rate reduction relating to the federal Tax Reform Act of 1986.

(4) Rate reduction resulting from PSC Staff audit.

(5) PSC Staff filed a complaint case against Southwestern Bell. As a result of the Commission's decision, Southwestern Bell sought and received a stay of the order. On September 26, 1989, the Public Service Commission, Southwestern Bell and the Office of the Public Counsel reached an agreement which reduced Southwestern Bell's annual revenues by approximately \$82,000,000.

(a) Every third month, residential customers received a bill credit which amounted to an approximate 25 percent reduction in their basic monthly telephone rate.

(b) Long-distance rates were reduced approximately 20%, touch tone rates approximately 30%, mileage charges were reduced as were service connection charges.

Additional Information

Customer Services

The Missouri Public Service Commission has three offices for assisting consumers. The offices are located in Jefferson City, St. Louis and Kansas City. The Commission is open from 8-12 noon and 1-5 p.m., Monday through Friday, except on state holidays.

If you live outside of the St. Louis and Kansas City areas, you may contact the Jefferson City office without charge by using the toll-free Consumer Hotline: (800) 392-4211.

If you live in the St. Louis or Kansas City areas, you may take your complaint to the PSC Consumer Services Offices in those cities.

Jefferson City: Missouri Public Service Commission
