

2025 PRA Results & Summer Readiness

Missouri Public Service Commission Update

May 21, 2025

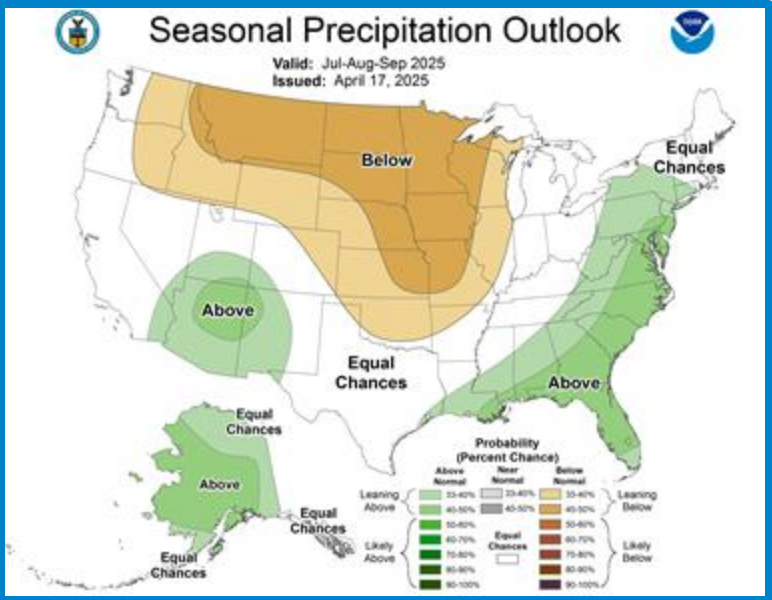

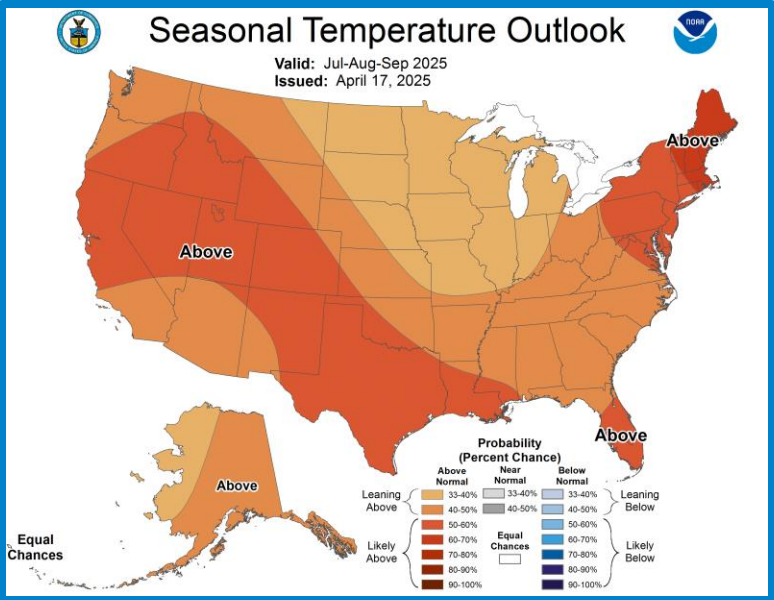

Summer Preparedness Executive Summary

- An above-normal summer is expected for temperatures across the MISO footprint
- A dry summer over much of the MISO footprint can act to exacerbate heat waves with worsening drought impacts
- The South region will experience above normal temperatures, with precipitation closer to near-normal, especially along the Gulf Coast
- A near to slightly above normal hurricane season is expected in the Atlantic Basin

MISO anticipates a hot summer driven by drought conditions in the West

Summer 2025 Weather Projections

Above-normal temperatures for June through August across the Continental U.S. with the core of the heat in the West

Below-normal precipitation for much of MISO this summer, with parts of the South region closer to near normal

Significant heatwaves across the US could be exacerbated by anticipated drought conditions

A near-normal hurricane season is expected; MISO is preparing for an early start to Hurricane Season

2025 Atlantic Hurricane Forecast

	Named Storms	Hurricanes	Major Hurricanes
2025 Outlook	17	9	4

Seasonal outlook maps source: [National Oceanic and Atmospheric Administration](#)
Hurricane outlook provided by Colorado State University

MISO's Uncertainty Management Model and dynamic reserves will be used to reliably operate the grid this summer, helping to produce more efficient market outcomes

- In-service solar will reach 15 GW by July
 - Last summer was 6 GW
- Expect significant solar ramps during sunrise and sunset
- Market products and operations processes are updated to help manage growing solar

Significant Solar ramps will shift the net load peak to after peak load hours requiring careful management by MISO operators

MISO systemwide accredited capacity compared to demand submitted by LSEs

Projected Summer Peak – 123 GW

Coincident Peak Forecast is submitted by MISO LSEs relative to the MISO seasonal peak and calculated on a seasonal basis

High Demand Projected Peak – 130 GW

Non-Coincident Peak Forecast is the peak load submitted by each LSE per month

MISO & Member Operator Summer Readiness Training

Market Capacity Emergency Drills

- MISO and Member roles during a capacity emergency
- Communication protocols during a capacity emergency

Hurricane Drills

- Overview of 2024 Season and forecast for 2025
- MISO and Member roles before and during a hurricane
- Simulation of hurricane, islanding, and Interconnection Checklist

MISO Operator Summer Readiness Training

Hurricane Action Plan Tabletop

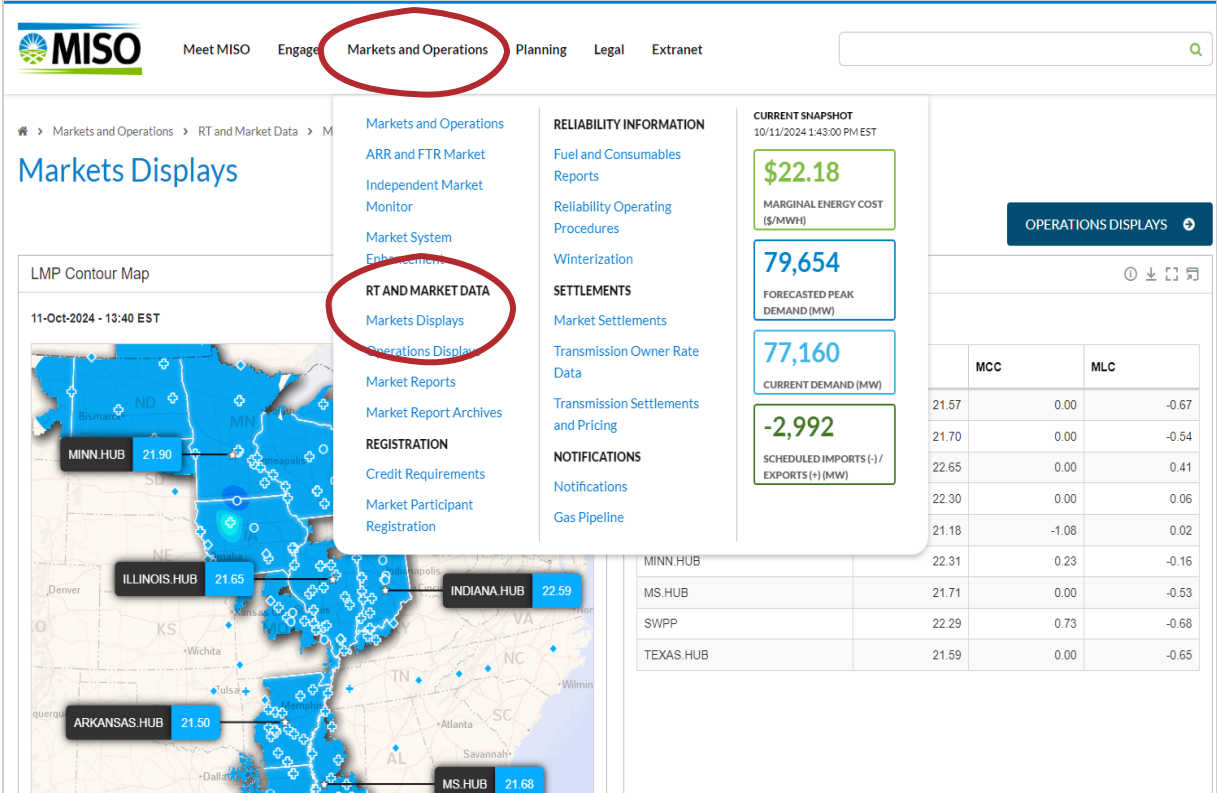

- MISO employees practice their role throughout the stages of the Hurricane Action Plan

Interconnection Reliability Operating Limit (IROL) Simulation

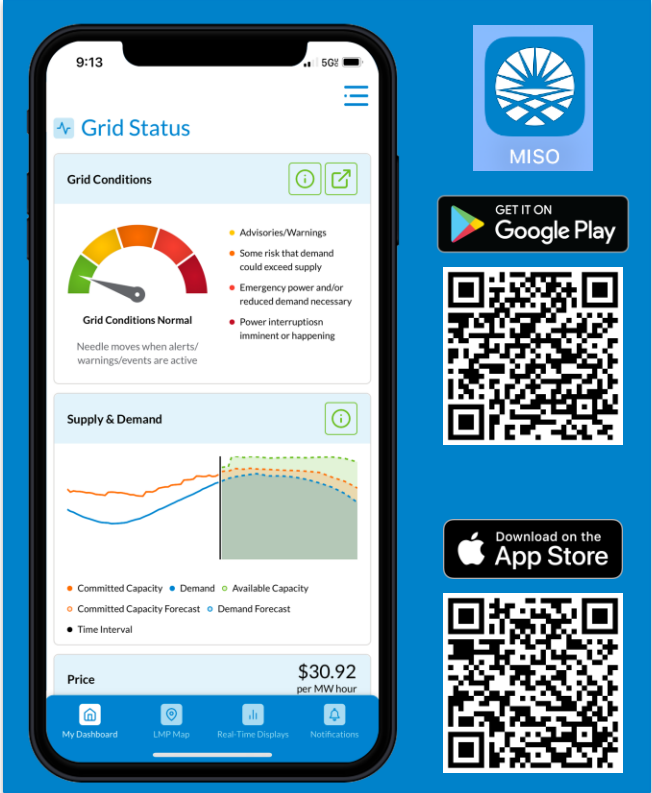

- Define, identify and mitigate System Operating Limits and IROL's
- Declare Transmission System Emergencies

Real-Time Market and Operations Display is available via the MISO website and the Mobile App

www.misoenergy.org

MISO App

2025 PRA Results

MISO met the planning year 2025/26 resource adequacy requirements for the 2025 Planning Resource Auction

Summer

\$666.50

—

Fall

\$91.60 (North/Central)

\$74.09 (South)

—

Winter

\$33.20

—

Spring

\$69.88

—

Annualized

\$217 (North/Central)

\$212 (South)

- Pressure persists with reduced capacity surplus across the region and is reflected through improved price signals in this year's auction
- MISO's Reliability-Based Demand Curve (RBDC) improves price signals, reflecting the increased value of accredited capacity beyond the seasonal Planning Reserve Margin (PRM) target
- Summer price reflects the lowest available surplus capacity and Fall price varied slightly due to transfer limitations between the North and South
- Surplus above the target PRM dropped 43% compared to last summer, despite the slightly lower PRM target (7.9% vs. 9.0% last year)
- The results reinforce the need to increase capacity, as demand is expected to grow with new large load additions

Auction outcomes are consistent with the design intent of the Reliability-Based Demand Curve (RBDC), and MISO and its members can expect more stable and predictable capacity pricing, especially in surplus situations

In the 2025 PRA, the RBDC...

- Delivers competitive prices aligned with seasonal risks and tightening surplus
 - Prioritizes summer availability, the system's highest-risk season (based on 1-in-10 LOLE)
- Values incremental capacity above and below the LOLE target based on its reliability
 - Clears capacity above target Planning Reserve Margin based on its reliability value in each season
- Stabilizes prices in non-summer seasons, avoiding extreme volatility

Why it Matters

- Sends clear and stable investment signals across the system, including to external resources
- Provides transparent value for capacity that exceeds the Planning Reserve Margin target
- Reflects subregional capacity needs and clears accordingly across all seasons

The efficiency of the Reliability-Based Demand Curve enabled MISO to secure more capacity at a significantly lower price

PLANNING RESERVE AUCTION: SUMMER 2025¹

¹ Approximately 90% of our load is hedged and hence not impacted by these prices. All numbers are an approximation and have been rounded.
² PRMR MW * ACP \$/MW-day. ³ Initial PRMR based on loss of load expectation study.
CONE: Cost of New Entry | PRMR: Planning Reserve Margin Requirement

Auction pricing outcomes with the Reliability-Based Demand Curve (RBDC) better reflect value of capacity and resource adequacy risk across seasons

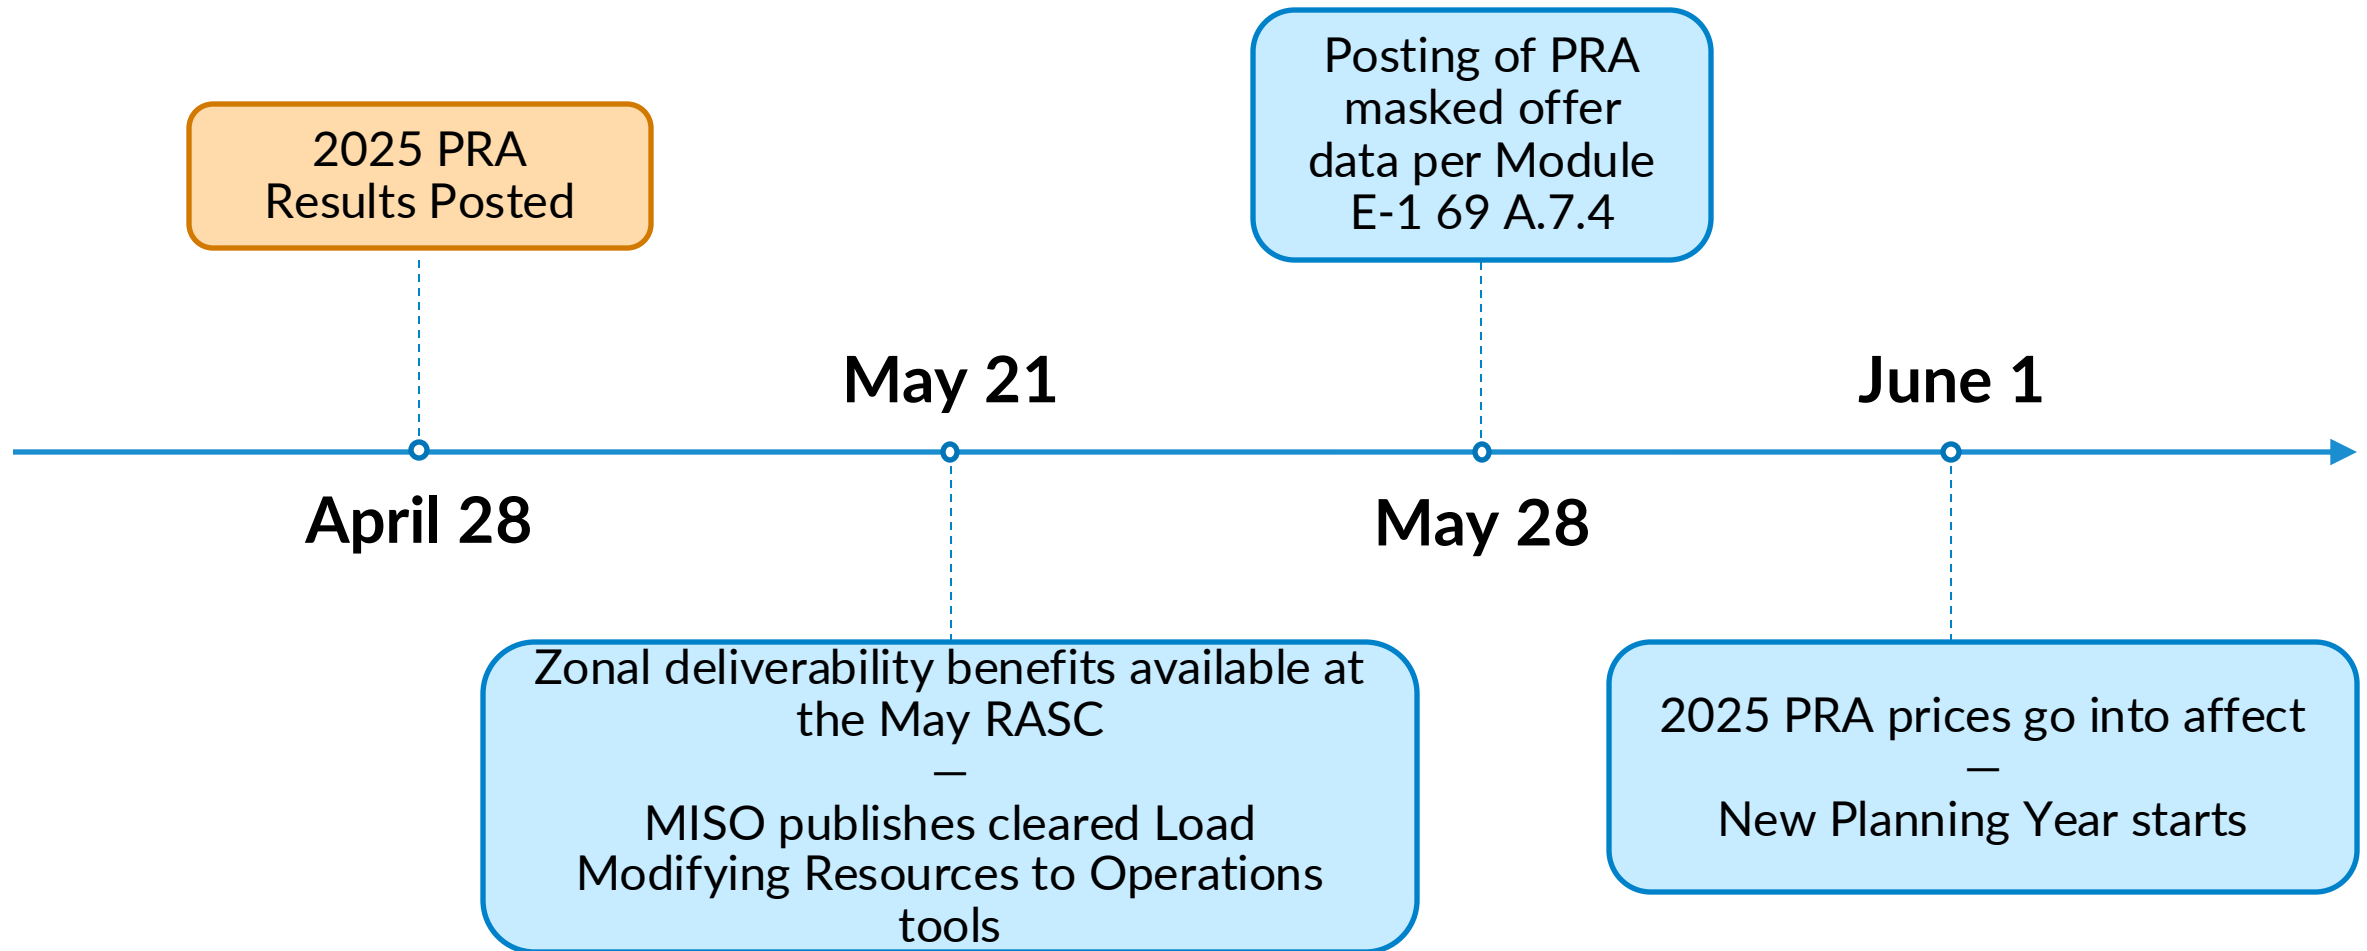

- Summer clearing of \$666.50 reflects highest reliability risk and reducing surplus capacity year-over-year
 - Surplus capacity in the summer has reduced from approximately 6.5 GW in 2023, to 4.6 GW in 2024, to 2.6 GW in 2025
- Incremental capacity cleared beyond the target Planning Reserve Margin based on the value it adds to reliability (e.g., North/Central “effective” summer margin at 10.1% and South at 8.7% vs. target 7.9%)
 - A small quantity of capacity, that was offered at a price higher than the reliability value indicated through the demand curve, did not clear

MISO's Reliability-Based Demand Curve (RBDC) improves price signals, reflecting the increased value of accredited capacity beyond seasonal reliability targets

- Under RBDC, each season has an initial reliability target (PRM%)
- Auction cleared above seasonal final reliability target, representing additional reliability value at cost-competitive prices

2025 Planning Resource Auction Initial Target vs. Final Cleared		Additional Reliability	Auction Clearing Price
Summer	<div>Initial, 7.90%</div> <div>Cleared, 9.80%</div>	+1.9%	\$666.50
Fall	<div>Initial, 14.90%</div> <div>Cleared, 17.50%</div>	+2.6%	\$91.60 N/C \$74.09 S
Winter	<div>Initial, 18.40%</div> <div>Cleared, 24.50%</div>	+6.1%	\$33.20
Spring	<div>Initial, 25.30%</div> <div>Cleared, 26.80%</div>	+1.5%	\$69.88
			Annualized \$217 (North/Central) \$212 (South)

Next Steps

MISO has acted on many Reliability Imperative initiatives to address resource adequacy challenges, but there's more to be done

Ongoing Challenges

- Accelerating demand for electricity
- Rapid pace of generation retirements continue
- Loss of accredited capacity and reliability attributes
- Intermittent nature of new resource additions
- Delays of new resource additions
- More frequent extreme weather

Completed Initiatives

- ✓ Implemented Reliability-Based Demand Curve in 2025 PRA
- ✓ Non-emergency resource accreditation (*effective PY 2028/29*)
- ✓ Generation interconnection queue cap
- ✓ Improved generator interconnection queue process (*New application portal coming June 2025*)
- ✓ Approved over \$30 billion in new transmission lines

Initiatives In Progress

- ☐ Implement Direct Loss of Load (DLOL)-based accreditation
- ☐ Enhance resource adequacy risk modeling
- ☐ Reduce queue cycle times through automation
- ☐ Implement interim Expedited Resource Addition Study (ERAS) process (*June 2025*)
- ☐ Demand Response and Emergency Resource reforms
- ☐ Enhance allocation of resource adequacy requirements

THANK YOU
QUESTIONS?

Appendix

Fall 2025 Reliability-Based Demand Curve, Offer Curves and Auction Clearing Prices

- Subregional RBDCs are determining clearing for both subregions
- Subregional Power Balance Constraint (SRPBC), South to North, is binding resulting in price separation between North/Central and South subregions in Fall season
 - ACP for North subregion is \$91.60, and \$74.09 South subregion
 - A marginal resource in the South sets the price in that subregion
- In fall season, “effective” margin for North/Central subregion is at 18.4% and 15.2 % for South subregion vs. target of 14.9%

Winter 2025/26 Reliability-Based Demand Curve, Offer Curves and Auction Clearing Prices

- Subregional RBDCs are determining clearing for both subregions
- No price separation between North/Central and South subregions in winter
 - ACP for both subregions is \$33.20
 - Multiple marginal resources, cleared *pro rata*, sets the price
- In winter, “effective” margin for North/Central subregion is at 23.3% and \$27.3% for South subregion vs. target of 18.4%

Spring 2026 Reliability-Based Demand Curve, Offer Curves and Auction Clearing

- Subregional RBDCs are determining clearing for both subregions
- No price separation between North/Central and South subregions in spring
 - ACP for both subregions is \$69.88
 - A marginal resource sets the price
- In spring, “effective” margin for North/Central subregion is at 27.5% and 25% for South subregion vs. target of 25.3%

Values displayed in MW SAC; ERZ: External Resource Zones | Final PRMR values provided at Zonal level given lack of RBDC Opt-Out.

Acronyms

ACP: Auction Clearing Price

ARC: Aggregator of Retail Customers

BTMG: Behind the Meter Generator

CIL: Capacity Import Limit

CEL: Capacity Export Limit

CONE: Cost of New Entry

CPF: Coincident Peak Forecast

DLOL: Direct Loss-of-Load

DR: Demand Resource

ELCC: Effective Load Carrying Capability

EE: Energy Efficiency

ER: External Resource

ERAS: Expedited Resource Adequacy Study

ERZ: External Resource Zones

FRAP: Fixed Resource Adequacy Plan

ICAP: Installed Capacity

IMM: Independent Market Monitor

LBA: Load Balancing Authority

LCR: Local Clearing Requirement

LOLE: Loss of Load Expectation

LMR: Load Modifying Resource

LRR: Local Reliability Requirement

LRZ: Local Resource Zone

LSE: Load Serving Entity

OMS: Organization of MISO States

PO: Planned Outage

PRA: Planning Resource Auction

PRM: Planning Reserve Margin

PRMR: Planning Reserve Margin Requirement

RASC: Resource Adequacy Sub-Committee

RBDC: Reliability-Based Demand Curve

SAC: Seasonal Accredited Capacity

SREC: Sub-Regional Export Constraint

SRIC: Sub-Regional Import Constraint

SRPBC: Sub-Regional Power Balance Constraint

SS: Self Schedule

UCAP: Unforced Capacity

ZIA: Zonal Import Ability

ZRC: Zonal Resource Credit
